OBJECTIVE	Master of Computer Application (MCA) student with a decent grasp of programming basics and a strong willingness to learn and improve. I'm organized, hardworking, and focused on getting better with every project. I communicate well, work smoothly with others, and enjoy taking on new challenges to grow professionally.	
EDUCATION	SASTRA University	2024-2026
	Master of Computer Applications	
	Prabhas Degree College (UG)	2020 -2023
	Bachelor's Degree, Mathematics, Electronics, Computer Science	
	Sri Viswasanthi Educational Institutions	2018-2020
	High School	
EXPERIENCE	Akiyam Solutions	Jan 2026 - Present
	Role:- Unity Game Developer	
	Designation:- Animator & Sound Designer	
PROJECTS	Operation CrossFire - Technologies used: C#, Unity Engine Built a modular FPS system with weapon pickup, switching, multiple fire modes, recoil, reloading, and ammo management. Implemented efficient state handling, animations, audio, and a dynamic HUD for real-time updates.	
	TIR & Dispersion of Light using XR Technologies used: C#, Unity Engine Developed an interactive Unity XR simulation demonstrating Total Internal Reflection and light dispersion using real-time ray rendering and VR interaction. Enabled users to manipulate light, mediums, and prisms for an intuitive understanding of optical phenomena.	
	Hemodialysis Simulator using XR Technologies used: C#, Unity Engine Developed an immersive Unity XR simulation of the hemodialysis procedure, enabling interactive training on blood circuit setup, dialyzer function, and fluid management. Designed for safe, repeatable learning with realistic equipment interaction and procedural flow.	
	Light Rays: Reflection and Refraction Simulation using XR Technologies used: C#, Unity Engine Developed a Unity XR simulation to visualize mirror and lens image formation with real-time ray rendering and object interaction, simplifying optical concepts.	
	HyperDrive Technologies used: C#, Unity Engine Developed Overdrive, a 3D Unity racing game with multiple game modes, environments, and split-screen multiplayer. Implemented progression via star-based unlocking of tracks and cars, delivering varied and engaging gameplay.	
	Red Runner 2D Technologies used: C#, Unity Engine Red Runner is a 2D side-scrolling runner game developed in Unity. The player controls a distinctive red character that automatically moves forward through procedurally generated terrain — jumping, sliding, and dodging through a relentless stream of obstacles, gaps, and hazards.	
	Flap with Caution Technologies used: C#, Unity Engine Developed Flap With Caution, a tap-to-fly Unity game with physics-based controls, obstacle avoidance, collision handling, and scoring, focused on smooth and engaging gameplay.	
CERTIFICATIONS	• Introduction to Internet of Things(IoT) from NPTEL • Cloud Computing from NPTEL • Computer Graphics using OpenGL from Udemy • Artificial Intelligence and Machine learning, Data Science Bootcamp from Udemy • Mendix: Low-code Application Development(Basics) from Udemy	
SKILLS	• Programming Languages: Python, C++, C# • Web Technologies: HTML, CSS, Bootstrap • Backend Technologies: SQL • Others: Slack, Jira, Maya
