OBJECTIVE	MCA graduate with strong skills in 2D and 3D animation, hands-on experience in Unity, and knowledge of XR development. Passionate about game art and level design, with experience in creating and implementing assets and animations in Unity. Quick learner, adaptable, and effective in team environments.	
EDUCATION	SASTRA University	2024-2026
	Master of Computer Applications	
	Prabhas Degree College (UG)	2020 -2023
	Bachelor's Degree, Mathematics, Electronics, Computer Science	
EXPERIENCE	Akiyam Solutions	Jan 2026-Working
	Role:- Unity Game Developer Intern	
	Designation:- Animator & Sound Designer	
PROJECTS	Red Runner 2D	
	Technologies used: C#, Unity Engine	
	Red Runner is a 2D side-scrolling runner game developed in Unity. The player controls a distinctive red character that automatically moves forward through procedurally generated terrain — jumping, sliding, and dodging through a relentless stream of obstacles, gaps, and hazards.	
	Glacier Run 2D	
	Technologies used: C#, Unity Engine	
	Glacier Run is a 2D side-scrolling platformer built in Unity, set across a series of icy, glacier-themed obstacle courses. Players guide a character through increasingly challenging levels — jumping between floating ice platforms, avoiding spike traps, and navigating narrow gaps that demand precision and timing.	
	Flap with Caution 2D	
	Technologies used: C#, Unity Engine	
	Developed Flap With Caution, a tap-to-fly Unity game with physics-based controls, obstacle avoidance, collision handling, and scoring, focused on smooth and engaging gameplay.	
	HyperDrive	
CERTIFICATIONS	Technologies used: C#, Unity Engine	
	Developed Overdrive, a 3D Unity racing game with multiple game modes, environments, and split-screen multiplayer. Implemented progression via star-based unlocking of tracks and cars, delivering varied and engaging gameplay.	
	Hemodialysis Simulator using XR	
	Technologies used: C#, Unity Engine	
SKILLS	Developed an immersive Unity XR simulation of the hemodialysis procedure, enabling interactive training on blood circuit setup, dialyzer function, and fluid management. Designed for safe, repeatable learning with realistic equipment interaction and procedural flow.	
	• Computer Graphics using OpenGL from Udemy • Artificial Intelligence and Machine learning, Data Science Bootcamp from Udemy • Mendix: Low-code Application Development(Basics) from Udemy	
	• Programming Languages: Python, C++, C# • Web Technologies: HTML, CSS, Bootstrap, Javascript, JQuery • Backend Technologies: SQL • Other Technologies: Blender • Others: Slack, Jira
